

IN THE SPECIFICATION

Please amend the Specification by inserting before the first line the following sentence:

--This application is a continuation of Application Serial No. 10/361,531, filed February 10, 2003.

Please amend the Specification as follows:

Please replace the Abstract of the Disclosure on page 18 with the following rewritten paragraph:

--A portable, handheld electronic navigation device includes an altimeter, a compass, and a GPS unit. An internal memory stores cartographic data, for displaying the cartographic data on a display of the navigation device. Accordingly, the device is capable of displaying cartographic data surrounding a location of the unit as determined by the altimeter. Additionally, through operation of an input, a user can cause the display to move, and thus display additional cartographic information, in the direction of the compass heading even when the user of the device is standing still. Furthermore, through utilization of a clock, such as the GPS clock, a user can determine altitude changes over time. Also, the altimeter of the navigation may be calibrated with altitude information entered by a user, with altitude information obtained from the cartographic or with altitude information derived from GPS.--
